PROFESSIONAL SUMMARY

Final-year Software Engineering undergraduate (expected graduation: 2027) with hands-on experience in production web systems, enterprise ERP logic, and AI-integrated applications. Proficient in modern full-stack development (React, Next.js, Node.js, FastAPI) and relational databases. Disciplined in clean code practices, automated CI/CD pipelines, and bridging complex business requirements with scalable technical implementations.

INDUSTRY EXPERIENCE

UI/UX Design Intern | DI11 Soft (Pvt) Ltd

May 2026 – November 2026 | Remote

- Architected end-to-end user flows and high-fidelity Figma prototypes for massive enterprise SaaS platforms, including Restaurant POS (RMS), Inventory (IMS), and Material Production systems.
- Designed responsive, cross-device interfaces (Desktop, Tablet, Mobile) for complex data tables, nested module navigations, and real-time dashboard analytics.
- Established scalable UI component libraries and design systems, strictly adhering to Human-Computer Interaction (HCI) principles and Accessibility (A11Y) guidelines.
- Streamlined developer handoff by structuring design assets and leveraging frontend knowledge (HTML, CSS, React) to ensure technical feasibility and smooth implementation.

FEATURED TECHNICAL PROJECTS

GlobalBooks Inc. Migration Project | Integration Architect & Developer (Java, Spring Boot, RabbitMQ, BPEL, REST/SOAP, OAuth2) | (View on GitHub)

- Architected an enterprise-grade hybrid integration system to migrate a legacy monolithic e-commerce application into a distributed Service-Oriented Architecture.

CORE TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript (ES6+), Java, HTML5, CSS3
- **Frontend Engineering:** React.js, Next.js, Flutter, Tailwind CSS, Component Architecture
- **Backend & API Systems:** Node.js, Express.js, FastAPI, Spring Boot, REST/SOAP, Asynchronous Architectures
- **Databases & Data Modeling:** PostgreSQL, MySQL, Relational Schema Normalization, Firebase (NoSQL)
- **DevOps, Cloud & Integrations:** Git/GitHub, Docker, CI/CD (GitHub Actions), RabbitMQ, Postman, Linux/Unix

EDUCATION

Bachelor of Science in Software Engineering

SLTC Research University, Padukka | 2022 – Present (Final Year)

Distinction Pass in English Diploma

British Way English Academy | 2018 – 2020

G.C.E. Advanced Level (Physical Science Stream)

Veyangoda Central College | 2018 – 2020

Results: 3 'S' Passes | 'B' in General English

G.C.E. Ordinary Level

Nalanda Boys' Central College | 2016 – 2017

Results: 9 'A' Passes

- Designed central BPEL workflows to manage cross-protocol transactions and implemented asynchronous event-driven choreography to decouple fulfillment services, ensuring high availability and system resilience during traffic spikes.

LankaLawBot | Web-Based Generative AI Platform | Full-Stack Developer (Python, FastAPI, Next.js, PostgreSQL) | (View on GitHub)

- Architected an end-to-end platform utilizing local Retrieval-Augmented Generation (RAG) for semantic document analysis and structured LLM workflows.
- Engineered asynchronous REST APIs using FastAPI to manage streamed responses and handle payload validations efficiently.
- Implemented comprehensive error handling and connection timeout protocols, preserving system stability under concurrent request loads.

SAPSRI | Production Web Platform | Full-Stack Developer (MySQL, JavaScript, PHP, GitHub Actions) | (View on GitHub)

- Maintained the live production domain (sapsri.lk) and authored automated GitHub Actions CI/CD pipelines to streamline deployment workflows.
- Optimized structured MySQL database schemas with strict referential integrity constraints to eliminate data anomalies.

Telco Customer Churn & Automated Retention Engine | Backend & MLOps Developer (Python, FastAPI, Docker, OpenAI API) | (View on DagsHub)

- Engineered a containerized Python backend service using FastAPI to preprocess tabular datasets and serve predictive inferences with sub-second response times.
- Built reproducible Docker environments for portable execution across Unix/Linux environments, managing dependencies and reproducible system builds.
- Integrated automated reasoning pipelines via OpenAI APIs to dynamically generate personalized retention actions from predictive model scores.

EcoChange | Smart E-Waste Management System | Mobile Developer (Flutter, Firebase, Node.js) | (View on GitHub)

- Built a cross-platform mobile client connected to cloud document storage, managing complex client-side state and transaction ledgers.
- Configured token-based JWT authentication alongside boundary input validation routines to ensure secure API communication.
